To whom it may concern,

Fulgent Genetics (Nasdaq: FLGT) is a New York State approved, CLIA certified, CAP accredited laboratory offering FDA emergency use authorized RT-PCR based tests for COVID-19 for New York City and many other clients, including some of the largest counties and municipalities in the United States. The samples received are only processed for RNA extraction and RT-PCR for COVID-19 viral RNA detection. No DNA is extracted. The samples are discarded immediately after the clinical reports are issued. The specimens are not used for anything other than the viral detection. Patient records are protected under the Health Insurance Portability and Accountability Act of 1996 (HIPAA). No genetic material or transcription or other record thereof, nor any patient data, is sold or otherwise used except to provide a COVID-19 diagnosis about each tested individual.

Sincerely,

A handwritten signature in black ink, appearing to read "Hi Gao".

Harry Gao, Ph.D.
Chief Scientific Officer and Lab Director
